Memo to File:

Re: Shinarump Uranium Mine

On April 15th 1977, Brian Buck and Ron Daniels visited the presently active Shinarump Uranium Mine which is visible from Highway 163, north of Moab. They spoke with the contract minor who informed them that this is a re-activation of a Uranium Mine which was active on May 15th 1975.

Apparently this mine was re-activated approximately five (5) months ago by General Electric Corporation. Mr. Jim Carroll from G.E.'s office in Naturita, Colorado and Mr Bob McDougal of Moab represent the firm in this matter.

A letter will be sent to General Electric asking what the status of the filing is.

BRIAN W. BUCK  
ENGINEERING GEOLOGIST
